WEBSITE DESIGNING DEVELOPMENT

In Order to succeed in today's world, you must have an internet presence. More and more people log on to the internet every day; there are billions of users world-wide and there are several reasons why one needs a website. A website is a powerful first impression of your business.

So get your business online today with our features and solutions. A complete detail of our website development packages and our company profile is elaborated in this brochure cum proposal.

Our Approach

MAP Enterprises applies a six step framework to every development project. This allows us to break projects down into distinct phases so that we can monitor progression and results along the way.

▪ Planning

Every project begins in the planning phase. In this phase, we work with the customer to discover what your needs, wants, and true objectives are. This allows us to thoroughly plan a complete project up front, avoiding costly delays and unforeseen challenges later on.

▪ Design

In this phase, we create mockups and prototypes based on earlier discussions. By allowing you to review a visual representation of our understanding of your needs early on in the project, we can further solidify your requirements and discover any additional needs or challenges that did not present themselves in the planning phase.

• Build

In this phase, we begin the process of building your app or website. We place a heavy emphasis on adhering to the technical and design specifications laid out in the planning phase, and perform regular functional tests, which allows us to correct any problems during the build rather than addressing them after project completion.

• Test & Train

We perform thorough testing on all sites and apps prior to final launch. We simulate heavy stress to measure performance, and test various browsers, operating systems, and devices with the site or app to be sure that it is responsive and performs well across all platforms. We also perform training with your staff, so that they will be able to easily make minor adjustments or publish new content once your site or app is live.

• Launch

The live launch of your site or app can be a stressful period. Even with thorough testing throughout development, unforeseen challenges can arise. That's why the MAP Enterprises team provides full monitoring and support during the launch period. We stand ready to make sure that your launch is successful, and are ready to quickly address any issues that arise.

• Support

Once your site launches successfully, you'll still require a technical partner to support ongoing needs. We offer a wide variety of support services for our completed projects, including monitoring and optimization.

Mobile App Development

Are you a start-up business or a large enterprise? Or are you planning to update or launch a new app? Or do you require a native, custom Android, iOS, Windows application. If you feel like getting cross-platform responsive application for your business, we can build it for you.

MAP Enterprises is a leading mobile app development company with extensive experience in building efficient, colossal, engaging, accessible mobile designs and creating innovative metamorphic & reliable application solutions for your corporation. An innovative (app development) company offering IT services for global clients which is driven by creativity and leading-edge technology. We embark on every application project by developing a specific procedure for it and not just simply taking your requirements and building you a solution.

Our team will formulate and engineer the ideal solution for your mobile application requirements, eventually making your corporation more shrewd and lucrative. We began developing mobile apps in 2016 and have evolved and expanded rapidly over time. We realize the significance of collaborative advancement and work side-by-side with you to classify the best mobile app development solution for your resources. Our teams of developers are proficient in complex platforms such as objective c, cocoa, hybrid, NFC, xcode, ibeacons and GPS location tracking. We have developed 50+ apps on platforms like android, iOS, Windows, PhoneGap.

You are associated with every step of the app development process in order to assure that your objectives and requirements are met and you get maximum ROI for your business projects.

PRICING:

Our Mobile Phone Development Starts from INR 35,000 and the actual rate is decided based on the complexity of the project.

Please write the details of your requirement to Info@traderscatalyst.com to get the exact quote.

SEO (Search Engine Optimisation) Package

Billions of web browsing sessions begin with a search query every day. With more than a billion websites competing for the top spot in search results, it can be difficult to drive traffic to your site from search engines. At MAP Enterprises, we specialize in an innovative approach to SEO that uses white-hat tactics to put your website at the top of your target audience's searches.

SEO, or Search Engine Optimization, is the process of enhancing a website to better the chances of it ranking highly in the search engines. What many people often do not know about Search Engine Optimization is that the goal is not to create a perfect site, but to create a site that is less imperfect than the competition. All else being equal, the search engine should see the optimized site as more relevant. This is not necessarily because the optimized site is of a higher design aesthetic or is more functional than its competition, but rather because it highlights the positives and eliminates as many negatives as possible.

SEO (Search Engine Optimization) Package

Pay-Per-Click (PPC)

Pay Per Click, or PPC can be a vital tool to maximize your potential customer base. If you think about your own internet usage, imagine how often you find yourself in front of search results, whether on Google, Yahoo, or another platform. By combining the proper words that reflect what your company offers, we can put you in the most visible position on any search results page.

We will start by analyzing your business and researching your industry. From this we will find the perfect keywords and organize them in strong campaigns and ad groups, then set up PPC landing pages that optimize conversions. The main benefit of a well-researched PPC campaign is that, believe it or not, the more relevant and intelligent you make it, the less search engines like Google will charge for your ad clicks and the more results you will see. If users like your ads, you've won big time. This is why we believe our PPC creation is not only valuable, but essential.

Here's an example of how we will manage your PPC campaign:

Staying current: Why pay for something that doesn't work for your company? We know the answer, and this is why we constantly evaluate the effectiveness of your keywords to maximize results.

Covering all the bases: Not all keywords are created equal, so in some cases the most popular terms and words will only get you so far. We will develop longer keyword terms to keep you competitive.

Ongoing process: Once you start a PPC campaign, it should be ever-evolving and adapting to changes in the search environment. We will make sure to stay on top of search result patterns.

Clearing clutter: If something isn't working, it goes in the trash bin and we analyze why the keywords did not work out, giving you an idea of what is and is not effective.
